ZERONLINE

From Zero to infinity, anything becomes possible! Zeronline is a brand that encapsulates fashion forward, expressive style within an urban culture. As the brand name suggests, the company operates primarily on an e-commerce & app based platform both of which are characterised by its urban design. The brand was crafted and its culture determined based on the LSM of 6 to 8 and the age demographic of 16 to 35.

At **Zeronline**, we've embraced the power of the app, creating an opportunity for the globally top providing fashion forward casual wear to the re starters, dream catchers and game changers among us!

Not only was the app user friendly but it also allowed consumers the option of having to accept push notifications so as to ensure that they are always aware of promotions and new merch drops!

The Zeronline website was built using WIX and integrated with ECWID to ensure that the e-commerce site allowed a payment gateway option for South Africans to shop online using a variety of payment methods.

Selecting WIX as the preferred website development platform was a simple decision to make as it allowed me to optimize the sites design frequently as well as design and manage promotions and new merchandise easily.

True to the culture of the brands identity, each social media post is designed with the trendy, urban individual in mind. Depending on the promotion, posts included a QR code that provided easy access to the online store along with the Google Play Store link within the copy allowing consumers to download the Zeronline app.

apparel design

Each T-shirt collection focusses on a specific progressive theme and each design is authentically created by myself, added to a spec sheet and heat pressed for final production.
